PROJECTS

Machine Learning Clustering Algorithms (Mini Project)

- Built clustering algorithms to analyze and group data, These algorithms include k-means, k-mode, k-median, k-medoids, and k-means++.
- To assess their performance, clustering validation metrics are used in order to predict and evaluate the best clustering algorithm for specific datasets.
- Implemented Using Numpy, Pandas, Seaborn, KNN, Validation metrics

Portfolio (Website)

- Built a captivating portfolio website that works through engaging animations, while ensuring a responsive layout and an intuitive user experience (UX) design.
- It is the perfect platform to explore my work, allowing visitors to delve into my creative work with visually appealing animations and a user-friendly interface.
- You can experience the immersive design and responsive nature of my portfolio website by visiting the link: <https://cyber0knight.github.io/portfolio/>.
- Implemented using HTML, CSS, Animations, Java Script
